

HOW TO GET INSTALAND UP AND RUNNING

1. You're gonna need an Instagram account ... build a new one. No need to be PVA.
2. Open the **get.php** file with a text editor like notepad++ and add your username and password there. Do the same in the **newfollowers.php** file.

```
require("../vendor/autoload.php");
$instagram = new \Instagram\Instagram();

//ADD AN INSTAGRAM ACCOUNT HERE
//DO NOT PUT YOUR PERSONAL ACCOUNT OR SOME ACCOUNT YOU'VE MANAGED ... CREATE A NEW ACCOUNT.
// THIS ACCOUNT DOES NOT NEED TO BE VERIFIED
$instagramUsername = "INSTAGRAM_USERNAME";
$instagramPassword = "INSTAGRAM_PASSWORD";
```

3. In the index.php you will find several comments telling you where to change text and some other things.

```
<!--THIS TEXT IS SHOWN AT THE HUMAN VERIFICATION PART ... CHANGE IT AS YOU LIKE -->
<p style="font-size:medium;">In order to keep our servers safe from bots and scammers We need to verify if you are human to commit the changes
new followers will be added to your account.
</p>
```

4. In the redirect.php file you're able to send the visitor to somewhere after they complete the offer ... You should add this page at your locker's redirect settings (like: <http://yourdomain.com/redirect.php>) - This page will simulate a server error and then redirect the user. You can just reload the land page (default behavior) or send them to your locker again, if your network has direct link to locker like OgAds.

```
if (counter == 0) {
    clearInterval(counter);
    window.location.href = " ./"; // REPLACE WHAT IS INSIDE THE COMA TO SEND THE VISITOR WHERE YOU WANT ... THIS DEFAULT VALUE WILL RELOAD THE LP
}
//IF YOUR NETWORK HAS DIRECT LINK TO THE LOCKER, LIKE OGADS, YOU CAN PUT IT HERE
}, 1000);
$('#retry').slideToggle("slow");
```

5. Sending sample followers to visitors: In this update INSTALAND can send some followers to visitors, so they will have more will in completing offers to unlock the rest. To use this feature you will need 3 more accs. This accs should look real to give more confidence to your visitor.

To use it just add the accs at the add.php file. Note the very 1st acc must be the same used in the other pages. You can use proxy if your page gets alot of traffic. Don't use proxy on the main acc (the one also used in get.php)

```

////////////////////
/////FOLLOW ACCOUNT 1/////
////////////////////

//IF YOUR PAGE GETS LOTS OF VISITORS PER DAY, YOU SHOULD USE PROXIES FOR THIS ACC.

//$instagram->setProxy("127.0.0.1:8888", "proxyUsername", "proxyPassword");
$username = "instagramUsername"; //USERNAME
$password = "instagramPassword"; //PASSWORD

```

To get notified by email (new feature) if something goes wrong with your accounts, put your email in the add.php file as below.

```

$emailForErrors = 'YOUR_EMAIL'; //ADD AN EMAIL HERE TO BE NOTIFIED IF ANY ACCOUNT BELOW RUN INTO ANY P

```

If you don't want to use this feature go to index.php around line 353 and look for this code: Delete or comment it (to comment use /* at the start of the block and */ at the end)

```

/////DELETE THIS BLOCK TO NOT USE THE AUTO SENDING FOLLOWERS/////
var formData2 = $( '#form' ).serialize();
$.ajax({
    [REDACTED]
});
/////END OF THE BLOCK TO BE DELETED/////

```

6. To change your images, the more safe way is to just replace the image you want with another with same name in the img folder. Try to replace default images for others with close resolution.
7. Have a patient look at the php files and read all comments ...

THANKS!!!
